

Going to hospital

If you are poorly you might need to visit the hospital.

You might need to wait in a special area.

You might see people wearing special clothes. They are doctors and nurses.

They might wear:

goggles

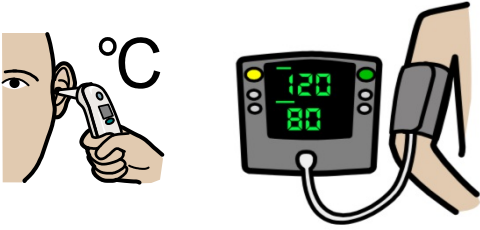

apron

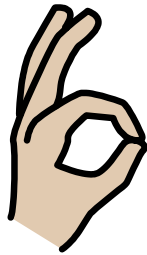

mask

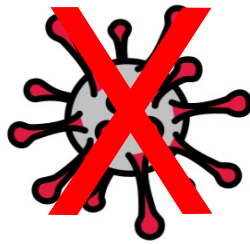

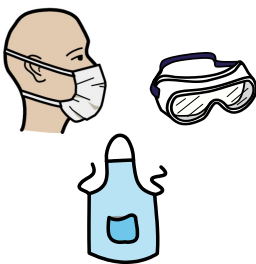

gloves

They might take your temperature and your blood pressure.

They might look different. This is ok.

The special clothes help keep germs away.

The doctors and nurses need to keep the germs away so they stay healthy.

They can help us better if they are healthy.
